CIBES VOYAGER

Swedish Brand with 70+ Years History

Safe & Comfortable Home Lift Solutions for You

CIBES VOYAGER

NEWEST HOME LIFT

MORE INTEGRATED INTO
YOUR HOME ENVIRONMENT

CIBES introduces a new look and more safety features to the villa facility – CIBES Voyager, bringing another update to the home lift market. After 4 years of Research and Development, our most cutting-edge lift yet is here. Every elevator is different. 4 Series, 13 different sizes, 45 different backgrounds, 268 colors

SPACE SAVING LIFTS WITH A SHAFT

No pit and top height requirement, self-contained shaft. For decoration-completed building, Cibes Lifts products are easy and fast to install as well.

SCREW DRIVE TECHNOLOGY

SMALL SIZE FOR A SPACE SAVING DESIGN

V80 is the CIBES group latest product of the 6th generation, which combines the advantages of screw driven lift of the historical CIBES products. It has no bottom pit, no top height requirement, with integrated shaft design, no machine room, and only one square meter of floor space for installation.

Fits perfectly in all environments!

Cibes Lifts are compliant with Sweden and European safety standard EN81 -41 and are certified by the notified body LIFTINSTITUUT

A short list of some safety features are noted below:

- » emergency stop
- » alarm
- » emergency lowering
- » emergency lighting
- » platform safety edges
- » telephone
- » emergency locking system

One of the advantages of our screw driven lifts, is the reduced headroom above the top floor level. For the top floor ceiling height, only 7' 2 5/8" is required for a standard full height door, or otherwise in the most constricted spaces, we can also provide gate access on the top landing.

The robust modular shaft can be finished in a range of different RAL powder coated colours or built with safety glass panels. Choose from any of over 268 different colors to suit your home and personal taste.

Cibes lifts can be equipped with automatic door openers as an option.

The controls on the lift are simple, elegant and suitable for the home environment, one touch call buttons are provided on each landing for ease of operation.

One other advantage of our screw driven lift solution is that even under ZERO pit conditions our lift can be installed, in most any kind of structure from detached home to high rise apartment.

THE SCREW DRIVE MECHANISM offers a smooth and very quiet lift movement, as a result of long experience and development. The elegance of our unique screw driven system is in its safety through simplicity which we have developed over more than 70 years of R&D and Manufacturing.

PERFECT

MULTI-LEVEL HOMES

Around the world, town houses and villa complexes are becoming more and more common. These houses often have basements and underground parking, reflecting a gated community where the roads are for pedestrians.

Cibes lifts were designed to be a perfect fit, in both sizes and customization ability.

No Pit, No Machine Room

Going up and down the stairs can be a burden for multigenerational families, and installing a traditional lift with shaft takes up significant floor space.

Cibes Lift developed one of the world's most convenient elevator solutions. It eliminates the cost and trouble of digging

a pit and developing a shaft and separate support structure. There is no need to modify your existing foundation, you can just put a Cibes no-pit Lift

directly on your lowest landing floor. Simple fixing points along the shaft that require minimal structural support are all that remains to install!

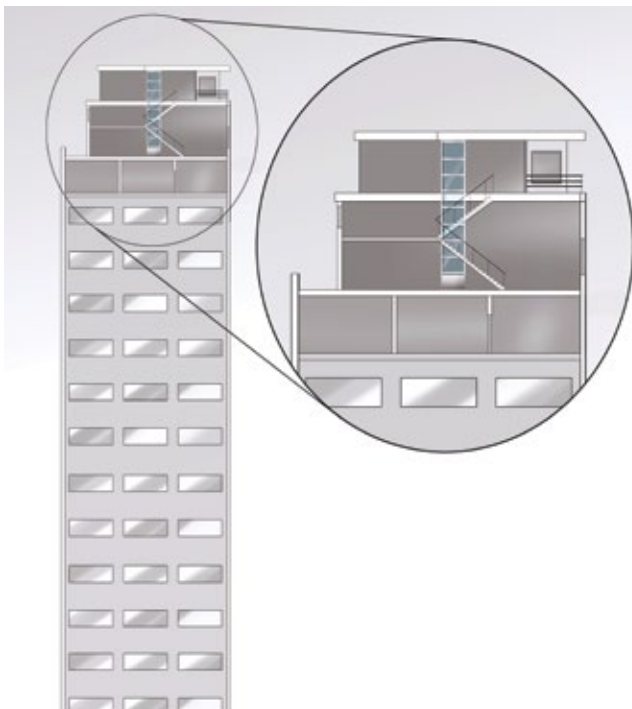

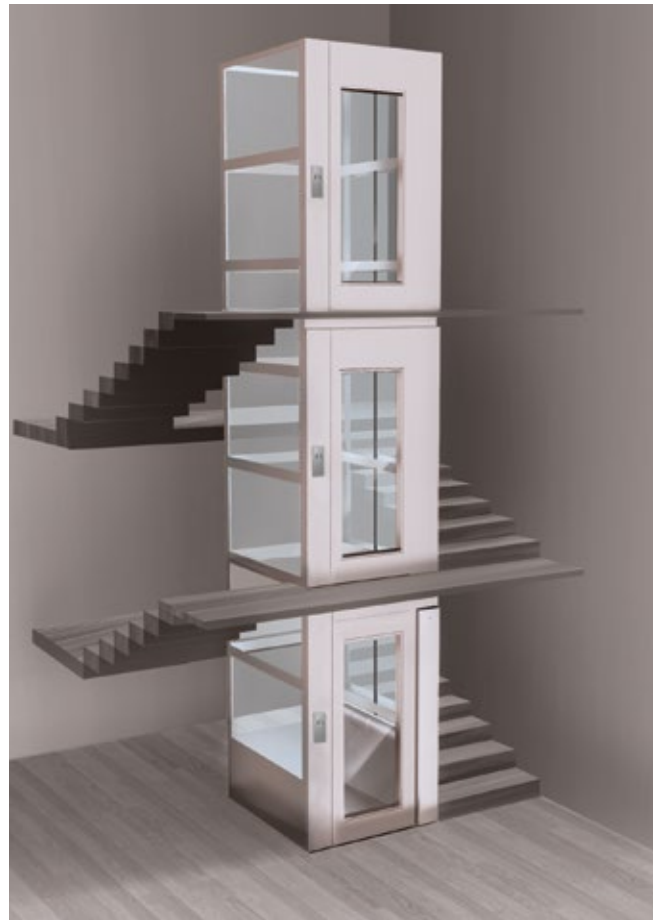

For homes with underground parking or basements, digging a pit requires destruction of the original foundation and building structure, which will require water proofing and other significant building works. The best place for a lift is the in middle of the staircase from a design perspective. Cibes Lifts space saving footprint and 360 degree panoramic glass shaft are perfect for this type of layout.

Space Saving

Parking cars underneath at 1st or 2nd floor basements is more and more common, even in areas with high water tables or prone to flooding.

Installing a traditional traction or hydraulic lift, with steel support structure and shaft, often has a usable Lift space utilization (lifting area versus total elevator structure total area requirements) of just 30-40%.

With Cibes home lifts, you can get above 70% space utilization, and even have small sizes with a footprint of just about 10 sq.ft. ! In these types of homes, the most beautiful solution is have the lift in the center of the staircase with panoramic glass.

In duplex or penthouse multi-level homes

it is often difficult or generally impossible to install a traditional lift due to considerations for the pit and counterweight issues. Cibes Lift is particularly well suited for this type of environment.

Top floor penthouses or mid level duplex homes usually just have the main elevator up to the first front door, but once inside your multi-level apartment, there is virtually no traditional lift that can be installed. With Cibes' small footprint, light weight, no pit, running off regular home electricity and no counterweight, they have the best solution for these types of homes.

The best place for a lift is the in middle of the staircase from a design perspective.
Cibes Lifts space saving footprint and 360 degree panoramic glass shaft are perfect for this type of layout.

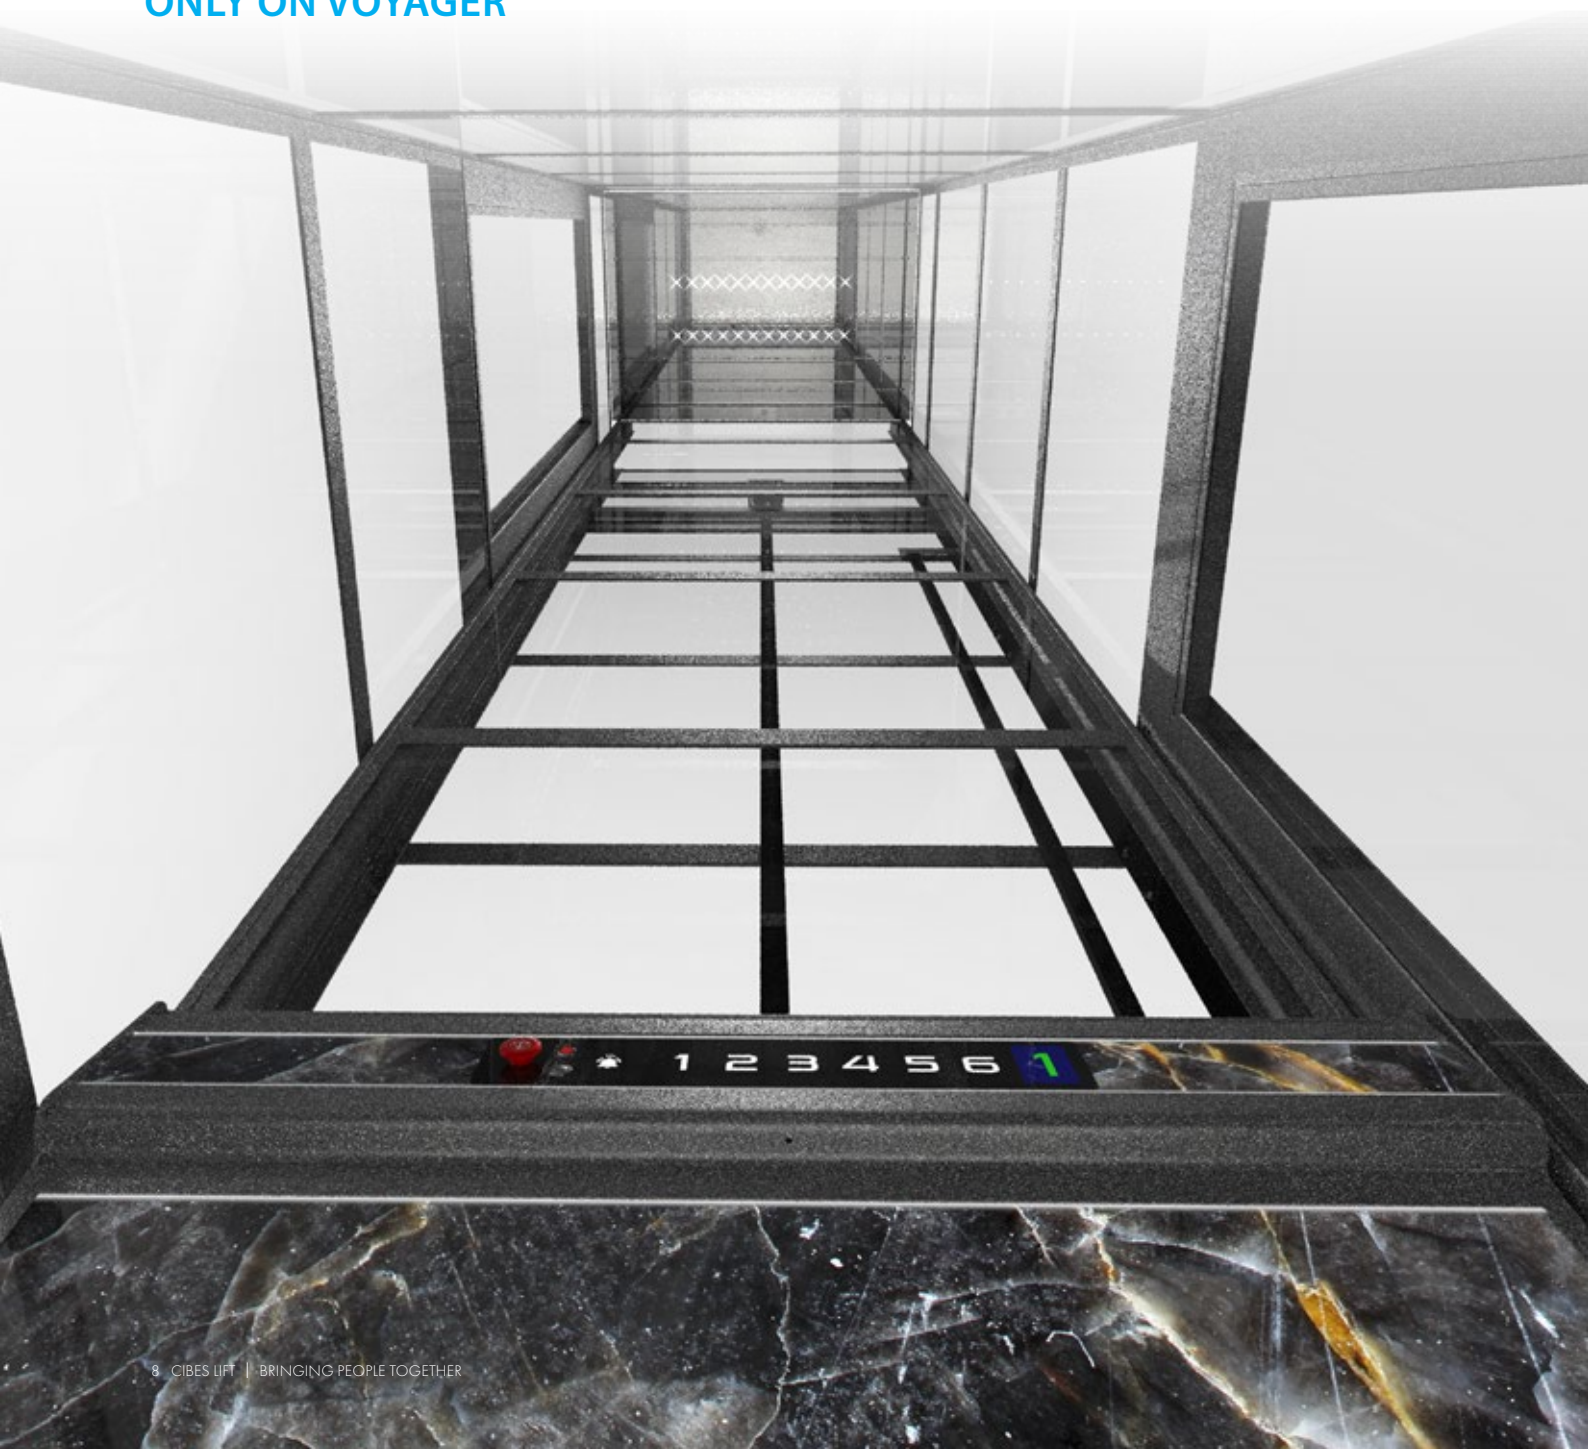

6TH GENERATION SHAFT

FIVE SURFACE PANORAMIC GLASS

The Cibes Voyager comes with a brand new shaft, designed to showcase your home.

The four-side panoramic glass shaft has always been one of the advantages of CIBES. Our new product, the V80 has in addition to the four-sided glass shaft also a mirror ceiling effect, which gives a 5 sides glass experience, increasing the sense of space permeability.

**Our most luxurious shaft yet,
ONLY ON VOYAGER**

INDOOR OR OUTDOOR

Cibes Platform Lifts are available both for indoor and outdoor. Don't have a space planned for a lift? Simply install it outdoors with our special weather-resistant lift solutions!

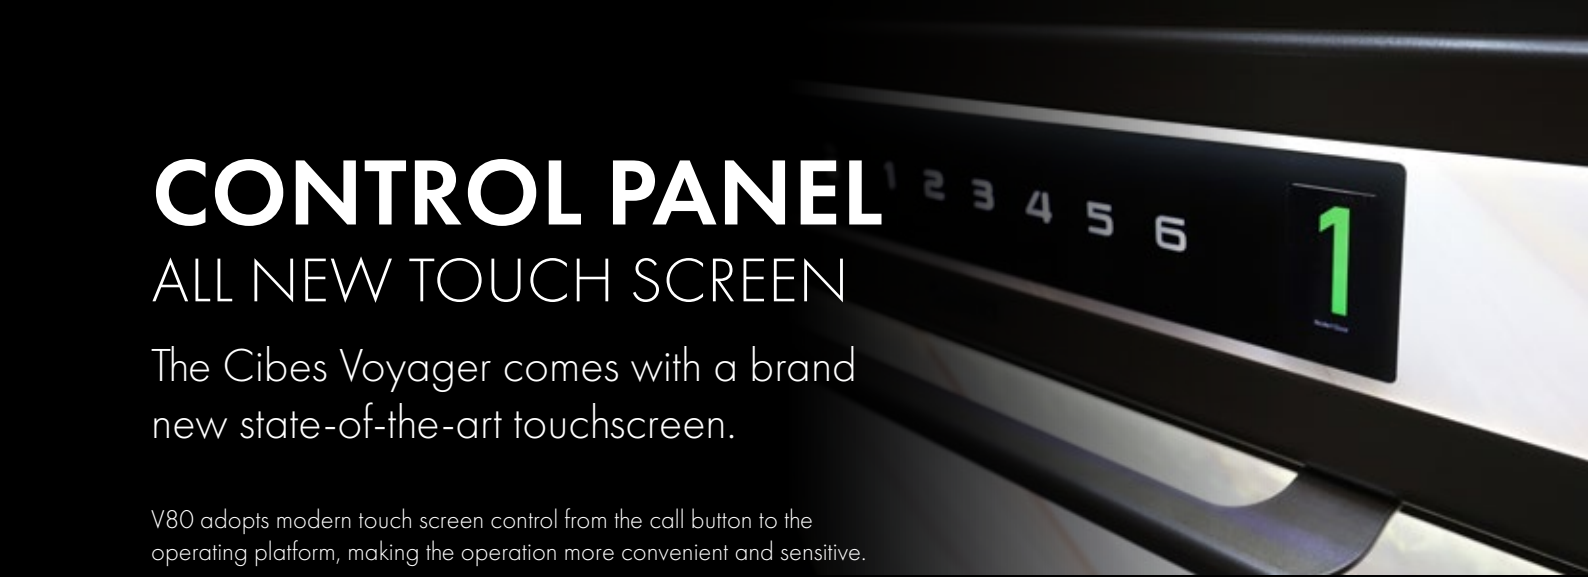

CONTROL PANEL

CIBES SWEDEN

+70 YEARS HISTORY

Cibes Lift Group is one of the world's largest manufacturers of low-speed lifts with headquarters in Sweden.

High-quality Swedish engineering and great design are the secrets behind our success. The factory in Sweden is located in Gävle, Sweden which has one of the top ten ports in Sweden. This helps our product to get exported more efficiently and conveniently.

The Swedish factory has a production area of more than 10,000 m² and is equipped with state-of-the-art machinery. Cibes has sold and installed more than 40,000 units in more than 50 countries, providing each user with the convenience of vertical travel.

CIBES ASIA

REGIONAL HEADQUARTERS

Cibes has been in the Chinese market since the 1990s, and the first platform lift was installed in Macau in 1995 and is still in use!

In 2012 Cibes began to explore the market in China, achieving remarkable development, rapid sales growth, and achieving a solid brand position in the platform lift and home lift industry.

In order to better serve domestic customers directly, in 2014 Sweden's Cibes headquarters invested in China to prepare wholly-owned subsidiaries. In 2015 the branch was established.

In 2018, the board of directors of CIBES Group decided to further invest in the establishment of the Asia-Pacific regional

headquarters. The site is scheduled to be located in Jiaxing High-tech Development Zone.

This is the first hub in Cibes that has been established outside of Sweden for more than 70 years. The center was established to provide better service to customers, to meet more customized needs in the Asia Pacific and European markets, to shorten delivery times, and to develop new products to better meet the needs of customers. It will also serve as a second base to support Cibes' Asia and global markets.
